

Accounting On-Line

Inventory Control

KEY FEATURES

GENERAL CAPABILITIES

- Maintains standard finished goods inventory quantities such as on hand, on order, available, and on hold
- Real-time posting of inventory status simultaneously from multiple users and multiple applications
- Securely accessible from virtually any Internet-connected computer

TRACKING

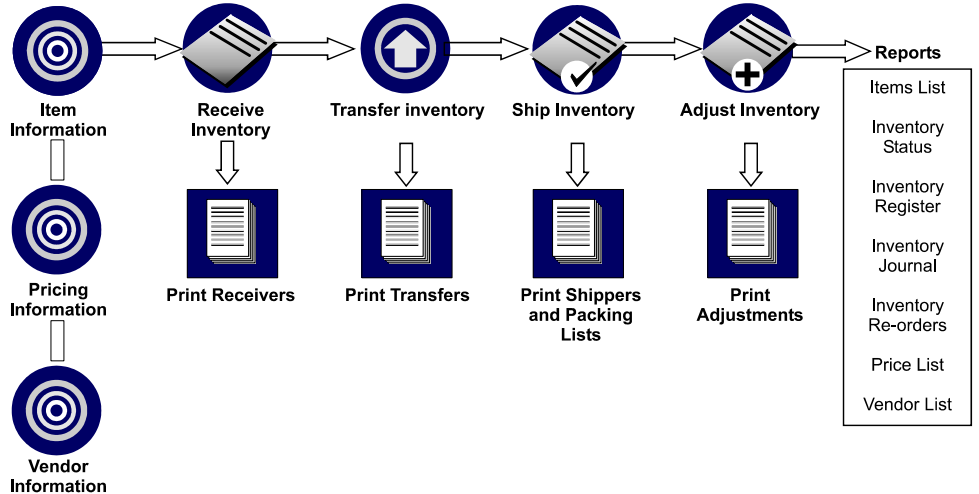

- Tracks unlimited vendors per item and supports unlimited number of hierarchical product lines
- Supports unlimited number of locations and warehouses; tracks items by location, warehouse, and aisle/bin
- Customizable totals can be readily added to track any other types of specific totals

PRICING

- Pricing can be set by percent of list, percent markup based on current cost, or percent margin based on current or standard cost
- Unlimited levels of pricing schedules

OPERATION

- FIFO, LIFO, average, and standard cost valuation methods available
- Access to transactions and information is controlled via very granular user permission settings
- An Advanced Transaction Definition feature allows for the creation of customized transactions for specialized business needs
- Supporting Documents feature allows uploading and attaching of files and documents, like paper purchase orders, to specific transactions or line items

An integrated part of the leading on-line professional accounting suite, securely accessible at any time, day or night—from any Internet-connected computer

The Inventory Control application improves a company's customer service by monitoring and controlling inventory related activities via on-line capabilities for receiving, transferring, shipping, and adjusting inventory.

A powerful pricing system further allows prices to be set for specific time periods, for specific products, and even for specific customers, with prices computed using any of several different methods.

Designed to manage finished goods inventory either at a single location or at multiple warehouses or locations with multiple product lines, the Inventory Control application can track any number of vendors per inventory item, along with reorder levels, quantities, and costs using multiple cost-valuation methods.

The Inventory Control application is fully integrated with our on-line suite of accounting applications, including the General Ledger, Purchase Order, and Order Entry applications.
